    How should I treat finding/condition y (given situation z)? OR Should I
use treatment/procedure x for condition/finding y? OR What is the efficacy of
treatment/procedure x (for condition y)? OR Does procedure/treatment x work
(for condition y)? OR Is treatment/procedure x indicated (for condition y)? OR
What is the best treatment/procedure to do (for condition y)? OR Does the
benefit of treatment/procedure x outweigh the risk? OR What are the options
for treatment of condition y (in situation z)? OR Is there any treatment for
condition y? OR What is the goal of treatment of condition y? OR At what
level of severity of condition y is treatment indicated?

<local\_source\_field3>

What is the cause of test finding x? OR What is the differential diagnosis of test finding x? OR Could test finding x be condition y or be a result of condition y? OR What is the likelihood that test finding x is coming from condition y? OR How should I interpret test finding(s) x? OR How should I use test finding x in my decision? OR At what level does the value of test x become clinically important? OR What are the normal values (reference range) of test x?

    What is the cause of test finding x? OR What is the differential diagnosis
of test finding x? OR Could test finding x be condition y or be a result of
condition y? OR What is the likelihood that test finding x is coming from
condition y? OR How should I interpret test finding(s) x? OR How should I
use test finding x in my decision? OR At what level does the value of test x
become clinically important? OR What are the normal values (reference range)
of test x?

<local\_source\_field1>obstetrics and gynecology</local\_source\_field1>

<local\_source\_field2>

2121

</local\_source\_field2>

<local\_source\_field3>

Is drug x (or drug class x) indicated in situation y or for condition y?  
OR What are the indications for drug x? OR Is any drug indicated for situation y? OR Does drug x work for condition y? OR How effective is drug x for condition y? OR What is the drug of choice for situation y or for condition y?  
OR What are the options for drug treatment of situation y or condition y? OR Is drug x<sub>1</sub> better than drug x<sub>2</sub>, x<sub>3</sub>, . . . , x<sub>n</sub> for condition y? OR Is drug x<sub>1</sub> just as effective as drug x<sub>2</sub> (in situation y)? OR Does the benefit of giving drug x outweigh the risk?

  What are the manifestations (findings) of condition y? OR What is
condition y? OR What does condition y look like? OR What are the criteria
for diagnosis of condition y? OR How do I diagnose condition y (based on
information I have or could get)? OR How can you tell if the patient has
condition y (based on information I have or could get)? OR Can condition y cause
manifestation (finding) x? OR How does condition y cause manifestation
(finding) x? OR Why did condition y cause manifestation (finding) x? OR Can
condition y present with (as) manifestation (finding) x?

<local_source_field3>
    How should I treat finding/condition y (given situation z)? OR Should I
use treatment/procedure x for condition/finding y? OR What is the efficacy of
treatment/procedure x (for condition y)? OR Does procedure/treatment x work
(for condition y)? OR Is treatment/procedure x indicated (for condition y)? OR
What is the best treatment/procedure to do (for condition y)? OR Does the
benefit of treatment/procedure x outweigh the risk? OR What are the options
for treatment of condition y (in situation z)? OR Is there any treatment for
condition y? OR What is the goal of treatment of condition y? OR At what
level of severity of condition y is treatment indicated?

</local\_source\_field2>

<local\_source\_field3>

What is the usual course (or natural history) of condition y? OR What is the prognosis (or likelihood of complications) of condition/situation y? OR Can condition y<sub>1</sub> lead to condition y<sub>2</sub>, y<sub>3</sub>, . . . y<sub>n</sub> (condition y<sub>1</sub> occurs before conditions y<sub>2</sub>, y<sub>3</sub>, . . . , y<sub>n</sub>)?

</local\_source\_field3>
